

Replacement Rear Drive Belts

A wide selection of 14 mm replacement final drive belts from Gates, Falcon and Dayco to fit most Original Equipment and aftermarket belt drive units. The application chart below may be used to determine the stock replacement belt for your particular application. The chart lists the model applications and years of fitment along with the belt width and tooth count. If you have installed oversized or undersized pulleys, it's a safe bet that we have something that will fit your particular application.

Gates HTD 'Poly Chain' Belts

All HTD Poly Chain belts have the distinctive exterior ribbing and are manufactured in the USA by the Gates Rubber Company. Poly Chain belts are Kevlar® reinforced and feature rugged construction with aramid fibers surrounded by polyurethane.

Dayco 'Panther' Rubber Belts

Rides smoother and quieter than conventional belts because the parabolic tooth profile eliminates trapped air between the belt and pulley. Patented graphite, self-lubricating, double nylon cover with special stiflex fiber allows this belt to hold up to maximum torque and extreme temperatures.

Falcon-SPC Carbon Fiber Belts by BDL

BDL's latest offering the Falcon-SPC (Sport Plus Carbon) rear drive belts incorporate the latest in design and technology. These belts are carbon fiber reinforced which offers up to 33% more tensile strength than standard drive belts which makes these belts a must for high-horsepower applications.

DuPont™ and Kevlar® are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.
